### Telerama Professional Server Co-location

---

Telerama's Professional Server Co-location plan is the final word in user-defined Internet presence. Under the terms of our contract, we place the server you provide on our T1 pipeline, and then assume a 'hands off' position regarding content, operating system, and software. What this means for you is direct access to Telerama's high-speed uplink, plus total control over the design and maintenance of your server and everything housed on it. Whenever you need to service or upgrade your machine, all you need to do is give us a call and we'll schedule an appointment with you.

**price** : the base co-location fee is \$300/month plus bandwidth usage. a contract is required, the length of the contract is negotiable. (there are discounts for longer term contracts.)

There are **no set up fees**

**bandwidth usage scale** :  
(bandwidth fees are added to the base colocation rate)

Average Transfer Rate:	Monthly Rate
0 - 128kbps	\$99/mo
128 - 256kbps	\$225/mo
256 - 512kbps	\$425/mo
512 - 1024kbps	\$850/mo
1024 - 1544kbps	\$1500/mo

bandwidth is sampled every 5m across a 30 day billing period, usage is based on the 95th percentile to determine the sustained usage charges during a billing period.

**alternatives** : too expensive? try our **Personal Co-Location** option.

### Professional Server Co-location Spec Sheet :

Telerama provides :

---

- the space for one server, keyboard, mouse and a small monitor.
- a 10 base T lan connection to our redundant t1s uplink.
- a private port on our switch (this reduces the possibility of packet sniffing or other abuses.)
- climate controlled environment in our secure machine room.
- there are **no restrictions on bandwidth usage**, co-located servers have use of our full bandwidth potential.
